

A REPORT ON WHAT TO INCLUDE ON THE PROPOSED QUICK GUIDE FOR INSTALLATION OF OPENMRS BY IMPLEMENTERS.

This document briefly describes the different things that can be included within the quick guide for openmrs installation for the implementers. The document is arranged in two sections where section one has what is proposed to be included in the document and section two has where it can be included on wiki.

SECTION ONE

1) Introducing the necessary tools for the installation

A brief introduction on the tools to be used for the installation could be included here. This can be by listing them.

2) Handling a tool one by one

Brief information of installation of each tool can be included with the installation link.

This should be straight to the point since the installation procedures already exist to the provided link.

3) Installation of openmrs

From this point we could handle the installation of openmrs.

4) Configuring and starting up openmrs

The configuration and starting up of openmrs can come up at this point.

5) Adding a link to the detailed installation

A link to the detailed installation process could be added at this point and this can act as the end of the document.

SECTION TWO

The proposed guide could be included as the first one before moving to the detailed section which already exists on wiki.
